ABOUT ME

Frontend Engineer with 2+ years of experience building production applications in React and Next.js. Worked on full product flows including authentication, payments, and data-driven interfaces, with a focus on stable and predictable behavior. Able to independently turn product requirements into working solutions and improve existing systems for better usability and reliability.

SKILLS

- **Frontend:** React, Next.js, TypeScript
- **State & Data:** Zustand, RTK Query, React Query
- **Forms & Validation:** React Hook Form, Yup, Zod
- **UI:** Tailwind CSS, Material UI, Chakra UI, shadcn
- **APIs & Integrations:** REST APIs, Firebase (Auth, Firestore), Payments (Stripe, PayPal), i18n, SEO
- **English:** Upper-Intermediate

EDUCATION

- **Ivan Franko National University of Lviv**
Master's degree in Biology
- **Full-Stack course at Mate Academy** (Git, HTML, CSS, JavaScript, Typescript, React, Web)

WORK EXPERIENCE

VRB Tech | Nov 2023 - Dec 2025

Frontend developer

Learning Platform

Platform that generates structured learning content (questions, flashcards, quizzes) from user materials and supports exam preparation.

- Built authentication system (email/password, Google sign-in, email verification) with token lifecycle (session, refresh, fallback login) ensuring stable user sessions and preventing unexpected logouts during token expiration
- Developed quiz and learning flows with mode-based logic, validation, and progress tracking across different learning scenarios
- Built calendar-based study planning with dynamic state, scheduling rules, and progress tracking across multiple learning scenarios
- Implemented hierarchical content rendering for large datasets (text, formulas, structured nodes) with infinite scroll and dynamic grouping into readable pages
- Developed gated learning programs with separate access logic and navigation inside the main application
- Integrated payments (Stripe, PayPal) and enforced subscription-based access across features
- Participated in product discussions and feature refinement, contributing to implementation decisions

Tech stack: React, TypeScript, RTK Query, Zustand, React Hook Form, Tailwind, i18n, Chart.js

Order Management & Delivery Platform

E-commerce platform with ordering flows, payments, and admin dashboard.

- Transformed a basic landing page into a structured product with multi-step ordering flow, user account, and admin panel
- Built step-based ordering flow with validation, pricing logic, and stock handling
- Developed admin tools for managing orders, including filtering, bulk actions, editing, and data export for operational workflows
- Integrated payments and handled edge cases in availability, pricing, and delivery logic

Tech stack: Next.js, Firebase, React Hook Form, MUI, next-intl

AI-powered Content Platform

Platform for generating and displaying AI-based content (text, images, media)

- Restructured content into modular blocks (analysis, summaries, linked elements), improving readability and navigation
- Implemented SEO optimization (meta tags, Open Graph, structured data)
- Built dynamic article system with Markdown parsing and custom rendering logic for flexible content structures
- Added filtering and internal linking for content discovery, improving navigation across large content sets

Tech stack: Next.js, Firebase, Chakra UI, i18n, Localise
